

Submissions and Reviews

How to submit cleaner work, follow review cycles, and respond to feedback without losing context.

Who should read this guide

Best for students, team leaders, supervisors, and reviewers involved in academic deliverables.

What you will learn

- Submit the right files with the right context the first time.
- Track review status clearly and respond to change requests faster.
- Reduce confusion between versions, comments, and final approved outputs.

Recommended first actions

- Double-check file names, version readiness, and comments before uploading.
- Write a short submission note that helps the reviewer understand what changed.
- Review feedback line by line before preparing a resubmission.

Why this card matters

This PDF expands the help-center card into a practical reference so users can understand not only where a feature lives, but also how to use it in a real graduation-project workflow.

Professional guide

Role-aware structure

Action-focused tips

Detailed walkthrough and practical recommendations for using this ProjectHub card well.

What this card covers

The Submissions and Reviews card focuses on the academic delivery loop that connects student work with formal feedback.

- It explains how to prepare a clean submission, what reviewers need, and how status updates should be interpreted.
- It supports more professional handoffs between teams and supervisors.
- It reduces avoidable delays caused by incomplete files or weak context.

Before you submit

Preparation matters because reviewers work faster when the evidence is easy to follow.

- Confirm the uploaded version matches the latest approved internal draft.
- Attach supporting files or notes when the deliverable depends on linked material.
- Use clear naming so reviewers can identify the document without opening it first.

Handling feedback well

A useful review loop is structured, visible, and easy to trace.

- Read comments carefully and map each requested change to an action.
- Resubmit with a short summary of what was fixed and what still needs clarification.
- Keep the team aligned so one reviewer comment does not create conflicting edits.

Common review mistakes

Most review delays happen because context gets lost between versions.

- Uploading the wrong file after making final changes elsewhere.
- Ignoring previous feedback and sending a new version without response notes.
- Treating approval as expected even when issues remain unresolved in the document.

Support note

Use this guide before every milestone submission to improve review speed and reduce avoidable back-and-forth.
