

Tasks and Projects

A clear guide to planning, assigning, tracking, and completing project tasks with confidence.

Who should read this guide

Best for student teams, leaders, teaching assistants, and supervisors following delivery progress.

What you will learn

- Break work into clear tasks with ownership and timing.
- Track movement from planned work to reviewed completion.
- Reduce late surprises by exposing dependencies and blockers early.

Recommended first actions

- Write task titles that describe the result, not just the activity.
- Add due dates, assignees, and status updates for every important task.
- Review the board regularly so blocked work is visible before deadlines slip.

Why this card matters

This PDF expands the help-center card into a practical reference so users can understand not only where a feature lives, but also how to use it in a real graduation-project workflow.

Professional guide

Role-aware structure

Action-focused tips

Detailed walkthrough and practical recommendations for using this ProjectHub card well.

What this card covers

The Tasks and Projects card explains how ProjectHub turns a large graduation project into manageable units of work.

- It focuses on task planning, assignment, progress tracking, review states, and completion quality.
- It shows how board movement reflects real project progress instead of cosmetic status updates.
- It helps teams connect daily execution with weekly and milestone-level goals.

Writing stronger tasks

Good tasks reduce follow-up questions because the expected outcome is already clear.

- Use specific titles, useful descriptions, and realistic deadlines.
- Attach context such as links, dependencies, or notes when another person must continue the work.
- Avoid vague tasks that hide whether a deliverable is actually review-ready.

Tracking real progress

Progress should show where work is stuck, not just what looks active.

- Move tasks only when the work state has truly changed.
- Use comments and updates to explain blockers, review requests, and scope changes.
- Check for overdue work and task clusters that indicate a weak plan.

Delivery quality

A finished task should support the next person in the chain, not create rework for them.

- Close tasks after verification, not just after coding or writing ends.
- Link supporting artifacts so reviewers understand what was delivered.
- Keep completed work easy to trace during supervisor reviews and grading discussions.

Support note

When task boards become crowded, use this guide to reset priorities and rebuild a clean flow from backlog to done.
